Topic: Navigating the Unknown: Opportunities and Challenges in Tech's Frontier

I. Title:

Day 2: Journey Beyond the Tech Horizon of ACM 17YSTOPIA!

II. Overview:

The topic "Navigating the Unknown: Opportunities and Challenges in Tech's Frontier" looks at new and emerging technologies like AI, blockchain, quantum computing, biotechnology, 5G, and IoT, which are changing how we live and work. It highlights the many benefits these technologies offer, such as economic growth, improved skills, and better global communication, as well as the challenges they bring, including ethical questions, privacy concerns, security risks, and the need for rules and fairness. The discussion focuses on the importance of planning, learning new skills, and making sure these advancements are sustainable. The goal is to encourage everyone to work together responsibly to shape a future where technology benefits everyone.

III. Topic Outline:

Topic 1 – In-Demand Technologies

Topic 2 - Building a Strong Foundation

Topic 3 - Skilling Up for Success

Topic 4 - Competitive Advantage

IV. Certificate of Attendance:

V. Evidence or Proof of Attendance:

VI. Selfie Picture:

VII. Evaluation:

During the seminar, I learned mostly about the working industry and how does AI, IoT, and more benefit to our society. I learned what is data science all about, the importance of data privacy and questioning where does our credentials go whenever we ask to chatgpt or any AI. It was an eye-opening experience that highlighted the need to understand and manage our data responsibly.
