Capstone Project: ETugma: Tutor Matching System with Assessment for Scribbles and Schemes Early Childhood Center

Aspect	Patent(Tutor Rating for Brokered Tutor Matching)	Capstone Project (ETugma: Tutor Matching System with Assessment for Scribbles and Schemes Early Childhood Center)	Similarities	Differences
Objective	It proposes a novel method for tutor-student matching in academic settings, utilizing a computer program to efficiently match students with highly rated tutors based on course relevance, qualifications, and past performance, aiming to enhance educational outcomes.	To develop an accurate and reliable online tutor matching system that will aid the students to find a suitable tutor for them, likewise for tutors who are looking for students to become their clients.	Both systems aim to connect students with the right tutors. The patent improves learning by matching students with top-rated tutors, while our project focuses on building a dependable online platform to help students find tutors and tutors find clients.	The patent aims to improve tutor-student matching in schools by considering course relevance and tutor performance. In contrast, our project is designed for wider use, helping match students with tutors and assisting tutors in finding clients, especially at Scribbles and Schemes Early Childhood Center.
Technology Used	server-side application that utilizes databases for storing	Server-side and client-side application that utilizes database for	Both systems use server-side applications with databases for storing	The patent uses a server-side application, while our project involves

	information and a web-based interface for communication	storing information and uses web-based interface for communication	information and a web-based interface for communication. Your capstone project, however, also includes client-side applications, enhancing the user experience on the client's device.	both server-side and client-side components. Our project also includes an LMS and a messaging system to improve communication and track progress.
Innovation	utilization of a computer program to automate and optimize the tutor-student matching process within academic institutions, enhancing efficiency and effectiveness by considering course relevance, tutor qualifications, and performance ratings.	Integration of a tutor matching system for students looking for tutors based on their learning preferences for precise and efficient matching, integrating an LMS to supervise the student's progress and also messaging system for better communication towards different users	Both systems use technology to match students with tutors efficiently. The patent relies on ratings, qualifications, and course relevance, while our project uses learning preferences and progress tracking through an LMS.	The patent automates tutor matching based on performance and course relevance in schools. Our project innovates by including learning preferences, progress tracking, and communication tools, creating a more complete and user-friendly system.
Market Application	this system targets educational institutions and tutoring agencies, providing a tech-driven	This system targets users are students that wishes to look for tutors, and tutors looking for a job opportunity for	Both systems share the goal of improving tutor-student matching through technological solutions,	The patent targets schools and tutoring agencies with a tech solution for matching students with tutors. Our

	solution for efficient tutor-student matching based on detailed criteria.	our beneficiary Scribbles and Schemes center	targeting users who are seeking educational support and opportunities.	project focuses on students and tutors at Scribbles and Schemes Early Childhood Center, providing a customized solution for their needs.
