

Observation:

1. What is the first part of the keyboard hardware you removed? Why?
 - During our activity, the first thing I removed was the screws behind the keyboard so I could open the keyboard and separate the top case and bottom case and so I could have easy access to the inside of keyboard.
2. Which part of a keyboard is difficult to disassemble? Why?
 - To be honest it wasn't that hard to disassemble but the scariest to disassemble was the membrane sheet because I need to clean it and its kind of sensitive.
3. Which part of a keyboard is difficult to assemble? Why?
 - The most challenging part when assembling was the keycaps, especially if the keycaps are not built in the keyboard or not connected directly in the keyboard because you have to put each keycaps one by one.
4. What are the safety measures you have to follow while doing this laboratory activity
 - First things first, you need to wear a gloves so if ever the your hands are sweaty, you won't get grounded, Take off any metal objects on your arms or fingers such as bracelets, rings or watches, and most important is to unplug the keyboard first.
