

Business Plan and Marketing Products

Objectives

- ✓ Discuss the meaning and importance of a business plan.
- ✓ Appreciate technology in learning things.
- ✓ Conduct simple surveys using technology and other data-gathering methods to determine market trends on products made of bamboo, wood, and metal, customers' preferences for products, types/ sources of innovative

Discover

This lesson will give you an introduction to what is a business plan and identify some terms connecting to marketing products. To begin, please play the Wordwall activity at this link: <https://wordwall.net/play/37016/745/616>

Learn

Marketing a product is how a business lets people know about what they're selling and tries to make people want to buy it. It's like telling a good story about a product to make it interesting, special, or useful to others.

Here are the terms that are connected with marketing a product:

Market trends are patterns or changes in what people like to buy and what businesses are selling. Imagine trends as waves that show what's popular or in demand at a certain time. When you understand market trends, you can predict what might become popular in the future and make smart choices.

You can figure out market trends by:

Observing: Look around to see what products are selling a lot. If many people are using or talking about something, it's likely a trend.

finishing materials, accessories, and designs, and processes for enhancing/decorating finished products, applying creative packaging and labeling techniques, applying technology-assisted and other means of product marketing, computing possible income from sales, and preparing plans for mass production or creating new product.

Researching: Check online or ask adults about what's popular and why. There are usually websites or reports that talk about what's selling well.

Asking Questions: Ask your friends and family what they're buying or interested in. Often, what people around you like can show you trends too.

Example:

Let's say you notice that many people at school are using reusable water bottles. This could be part of an "eco-friendly" trend, where people buy products that are good for the environment.

Customers' preferences are the things people like or want when they choose to buy a product. Think of it as their favorites. When you know what customers prefer, you can offer products that they're more likely to buy.

How to Determine Them:

Observe What People Choose: Look around to see what people are buying more of. If most people in your class like a specific brand of sneakers, it's a clue about their preferences.

Ask Questions: You can ask friends or family what they like and why. People often have reasons for their choices—like taste, color, style, or how the product makes them feel.

Look at Reviews or Ratings: Online reviews or stars (ratings) can show if a lot of people prefer a product. If something has many good reviews, it probably means it's a favorite for a lot of people.

Example:

Let's say a new flavor of chips comes out, like "sour cream and onion," and a lot of people buy it instead of the regular "plain" flavor. This shows a preference for the new flavor.

Types or sources of innovative finishing materials, accessories, and designs are new or creative ideas used to make products look and work better. These can be special

materials, extra parts, or unique designs that make something more attractive, comfortable, or useful.

How to Determine Them:

Check New Products: See what new features are on the latest products, like clothes, gadgets, or furniture. If there's something you haven't seen before, it might be an innovative material or design.

Observe Trends: Look at what's becoming popular. If lots of people are using a certain type of fabric, color, or accessory, it's likely something new and exciting.

Read About It: Magazines, websites, or even apps sometimes talk about "new releases" or "innovative designs," which show new materials or styles that companies are using.

Example:

Finishing Material: A jacket made with a special fabric that glows in the dark. This fabric is new and makes it safer to wear at night.

Accessory: A backpack with a built-in USB charger for your phone. This feature is added to make it more useful.

Design: Shoes with special cushioning that makes running more comfortable. This is a new design that improves performance.

The processes of enhancing or decorating finished products are the steps taken to make a product look better or more interesting after it's already made. It's like adding extra details or designs to make it stand out and look cool!

How to Determine Them:

Look at Products Around You: If you see a plain item that has been made more interesting with colors, patterns, or shapes, it's been decorated or enhanced.

Ask About the Steps: Sometimes, enhancing products requires certain steps, like painting, polishing, or adding a protective layer.

Check for Added Decorations: Look for anything extra that wasn't part of the original item, like glitter on a birthday

card, embroidery on clothes, or unique handles on furniture.

Example:

Painting: A plain mug can be painted with designs or colors to make it more fun to use.

Stickers and Decals: A water bottle can be decorated with stickers or decals to make it more personal.

Polishing or Shining: Wooden furniture can be polished to make it shinier and look nicer.

Creative packaging and labeling techniques are ways to make the outside of a product (like its box or label) look interesting and eye-catching. It's like wrapping a gift in a fun way so people want to open it. Creative packaging makes people notice and want the product, while labels tell them important information, like what it is and how to use it.

How to Determine Them:

Notice Unique Packages: Look for products that have unusual shapes or colorful designs. If the package stands out, it's likely using creative techniques.

Check Labels for Special Features: Sometimes labels have fun fonts, bright colors, or images that match the product. They might also have easy-to-read instructions.

Look for Eco-Friendly Packaging: Some packaging uses special materials like recycled paper to be more environmentally friendly. This is another creative technique that helps the planet!

Example:

Packaging: A juice box that's shaped like a fruit or has a built-in straw is a creative way of packaging the drink.

Labeling: A bottle of shampoo that has a label with bright colors and images of fresh fruits to show the scent.

Eco-Friendly Packaging: A toy wrapped in paper instead of plastic to reduce waste.

Technology-assisted product marketing is when companies use different types of technology, like phones, computers,

or social media, to help people learn about their products. Technology makes it easier to reach a lot of people and show off what the product can do in fun and creative ways.

How to Determine Them:

Look for Ads Online: When you're online, you might see ads pop up on websites or apps. These ads are using technology to tell people about the product.

Notice Social Media Posts: Sometimes companies use social media platforms like Instagram, TikTok, or YouTube to show their products in creative ways, like making short videos or sharing fun pictures.

Check for Apps or Websites: Companies often have apps or websites where you can see their products, learn more about them, or even shop online.

Example:

Video Ads: A company might make a video that shows how their product works and put it on YouTube or TikTok.

Social Media Influencers: Someone on Instagram might post a picture using a new type of backpack, showing others how cool it is.

Shopping Websites: If you go on a website like Amazon, you can see tons of products with pictures, prices, and reviews to help you decide what to buy.

Possible income from sales is the money you could make from selling a product or a service. It's like when you sell something at a yard sale or a bake sale and get money in return. The possible income tells you how much you might earn from selling something.

How to Determine It:

Calculate the Price x Number of Items Sold: Think about how much you'll charge for each item and how many items you think you'll sell. Multiply those together to get an estimate.

Look at Similar Sales: Check how much money people made selling something similar. This can give you an idea of what you might earn.

Estimate Based on Demand: If you know a lot of people want the product (like on a hot day at a lemonade stand), you can predict you might sell more and earn more.

Example:

Lemonade Stand: If you charge P50.00 per cup and think you can sell 20 cups, your possible income would be $P50.00 \times 20 = P1000.00$.

Selling Cookies: If you bake cookies and sell each for P20.00, and you think you can sell 15 cookies, your possible income is $P20.00 \times 15 = P300.00$.

Plans for mass production and new products are ideas and steps that companies make to create a large number of products quickly, so they can sell them to lots of people. This also includes planning to make new things that people might want to buy.

How to Determine Them:

Look for Factories or Production Lines: When companies want to mass-produce something, they often use machines and factories to make lots of items quickly and in the same way each time.

See What's Coming Out: New products are often announced in stores, ads, or on social media. Companies might show previews of these new things before they're available to buy.

Look for Market Research: Sometimes, companies ask people about their opinions on what they might like. This feedback helps companies decide what to mass-produce or create as a new product.

Example:

Mass Production: A toy company making thousands of dolls to sell before the holiday season. They use machines to make each doll the same, so it's faster and more efficient.

New Product: A phone company creating a new model with better features, like a better camera. They'll design, test, and then mass-produce it so people can buy it.

- A business plan is a guide that explains what a business wants to do, how it will work, and how it will make money. Think of it as a roadmap for starting or growing a business, showing step-by-step how it will reach its goals.

Here's a basic structure of a business plan:

1. **Business Idea**

Name of Business: What will you call your business?

Product or Service: What are you selling or offering? (e.g., lemonade stand, homemade crafts, tutoring for younger kids)

2. **Target Market**

Who Are Your Customers? Describe who will buy your product or service. (e.g., neighbors, classmates, family members)

Why Will They Buy It? Explain why your product or service is appealing to them.

3. **Marketing Plan**

How Will People Know About Your Business? Think about how you will tell people about your business. (e.g., flyers, social media, word of mouth)

Pricing: Decide how much you will charge for your product or service.

4. **Costs**

What Do You Need to Start? List the materials or resources you need to start your business (e.g., ingredients for lemonade, craft supplies).

How Much Will It Cost? Estimate how much money you need to buy these materials.

5. **Revenue**

How Much Money Will You Make? Calculate how much money you expect to earn from selling your product or service.

6. **Profit**

How Much Will You Keep After Costs? Subtract your costs from your revenue to see how much profit you'll make.

7. **Goals**

What Do You Want to Achieve? Set some goals for your business. (e.g., earn \$50, sell 20 items, get 10 repeat customers)

8. **Challenges**

What Could Go Wrong? Think about potential problems and how you might solve them. (e.g., bad weather for a lemonade stand, running out of supplies)

9. **Timeline**

When Will You Start? Plan when you will start your business and any key dates (e.g., first sale, big event).

10. **Conclusion**

Why Will Your Business Succeed? Sum up why you think your business idea will work.
