

Formative Assessment
Mathematics 7
1st Trimester, AY 2024-2025

- A. Read each question. Use simple methods to find the answers and provide explanations.
1. What do Discount, Commission, Selling Price, and Sales Tax have in common?
 2. Aside from computing first the discount then subtracts it from the original price to get the selling price, how else can the selling price be computed if the rate of discount and the original price are given?
 3. Per annum means per year. This is the required time in simple interest, if the given time in the problem is 9 months, can 9 substitute t in $I = P \cdot r \cdot t$? If not, what should be?
- B. Answer each problem with the correct unit. Show solutions in your drill notebook.
1. A bank is offering 2.5% simple interest on a savings account. If you deposit P5000, how much interest will you earn in 24 months?
 2. A small grocery store buys a box of canned goods for ₱500 and marks it up by 25% before selling it to customers. What price will the grocery store charge its customers for the box?
 3. If a Book costs PHP 700 and is on sale for 15% off, what is the selling price?
 4. Jose purchased a new computer for P23,000 at the Samsung Store. If sales tax is 12%, what was the total of her purchase?
 5. If a bicycle has a marked price of PHP 35,000 and has a discount of 5%, what is the selling price?
 6. Salesman Randy gets fixed salary of P20,000 per month and a commission of 2% on sale. If total sale is P80,000 for the month, find his total salary for the month?
 7. Kevin makes a commission of 14% on each TV set sold at store. Each TV costs P22,000. How much money will he make as commission if store sells 25 TV sets?
 8. A PWD receives a total discount of 32% on a medicine priced at P60.00. How much is her change from a 50-peso bill?
