PRELIM LABORATORY EXERCISE 2

SWOT ANALYSIS

(Capstone Project)

BACKGROUND SCENARIO

As discussed in the module lesson, the primary purpose of the SWOT analysis is to identify and assign significant factors that affect the business to one of the four categories to analyze where it stands in the market and help guide an organization's strategic planning process. Don't worry about elaborating on the nature of the strengths, weaknesses, opportunities, and threats; bullet points are sufficient at this stage of the analysis. Just capture the factors that are relevant in each of the four areas using two or three words to describe them. After listing factors in all four areas, compare your lists side by side to get an overall picture of how the businesses is performing and what issues need to be addressed. Create four prioritized lists by prioritizing the issues by importance and ease of implementation by asking yourself "What needs to and can be addressed now?" and "What can and will have to wait until later?" Finally, review the prioritized lists by asking:

QUESTIONS:

1. How can we use our strengths to take advantage of the opportunities identified?
2. How can we use these strengths to overcome the threats identified?
3. What do we need to do to overcome the identified weaknesses to take advantage of the listed opportunities?
4. How can we minimize our weaknesses to overcome the identified threats?

REFLECTION QUESTIONS:

1. What Conclusion have you reached regarding this case study?

SWOT Analysis Capstone Project: ETugma, Tutor Matching System with Assessment for Scribbles and Schemes Early Childhood Center

Strengths

1. Smart Matching (Collaborative Filtering):

ETugma automatically matches students with tutors based on things like expertise, fees, and subjects. This makes it easier and quicker for students to find the right tutor.

2. Easy Communication (Chat Feature):

Tutors and students can chat or email directly through the system, making it simple to talk about schedules, subjects, and how the sessions will be done. This keeps everything in one place without needing other messaging apps.

3. Convenient Payments (GCash Integration):

ETugma uses GCash for payments, so students and tutors can handle transactions easily and securely. This also helps everyone keep track of payments.

4. Verified Tutors (Admin Credential Check):

The system checks tutor credentials to ensure they're qualified, which builds trust with students and parents that the tutors are capable.

Weaknesses

1. Limited to One Tutoring Center:

Right now, ETugma only works with Scribbles and Schemes Early Childhood Center, which makes it hard to grow and include more tutors or students from other places.

2. Manual Admin Work (Tutor Verification):

Admins have to manually check tutor credentials, which takes time. As more tutors join, this could slow things down. Automating this process would help.

3. Few Subject Choices:

The system only offers subjects taught at Scribbles and Schemes, which might not be enough for some students. Offering more subjects could attract a wider group of students.

4. No Real-Time Session Tracking:

Although students and tutors can book and chat, the system doesn't have a way to track live tutoring sessions. This makes it hard for admins or parents to know what's happening during a session.

Opportunities

1. Expand Subject Choices (Partner with More Centers):

ETugma can grow by adding more subjects and partnering with other tutoring centers. This would attract more students with different needs.

2. High Demand for Online Tutoring:

With more people looking for online tutoring due to the pandemic, ETugma is in a great position to attract parents and students who need flexible learning options.

3. More People Using Technology (Digital Literacy Growth):

As more parents and students get used to learning online, ETugma will become easier for them to use, leading to more people adopting the platform.

4. Add More Payment Options (PayMaya, Coins.ph):

Offering more payment methods like PayMaya or Coins.ph would make it easier for different users to pay in the way that works best for them.

Threats

1. Competition (Other Tutoring Platforms):

There are already popular tutoring platforms like 51Talk, so ETugma needs to stand out, possibly by focusing on local needs or adding unique features.

2. Cybersecurity Risks:

ETugma handles sensitive information like payment details and tutor credentials. Without strong security, the system could be at risk of hacks or data breaches, which could damage its reputation.

3. Technology Barriers for Some Users:

Some parents or students, especially in rural areas or older generations, might have trouble using the online system. If the platform is too hard to use, it could limit how many people sign up.

4. Dependence on Internet Access:

In areas with poor internet connections, it might be hard for users to access ETugma consistently. This could limit the number of users, especially in rural areas with less reliable internet.

Prioritized Issues

1. Tutor Credential Verification:

Making sure tutors are qualified is really important for trust. Right now, this is done manually, but speeding it up by automating parts of it or using a service to check tutor backgrounds would make the process faster and more reliable.

2. Expanding Subject Variety:

Adding more subjects and partnering with other tutoring centers will help ETugma grow and attract more users. It's not too hard to start offering a wider range of subjects by working with more schools and tutors.

3. Limited to One Center:

Right now, ETugma only works with Scribbles and Schemes, but opening it up to more tutoring centers or letting independent tutors join will help the system grow faster and serve more students. This can be done by adjusting the platform to welcome new tutors and centers.

1. How can we use our strengths to take advantage of the opportunities?

Smart Matching can help find tutors for new subjects and centers as ETugma expands.

The chat feature makes it easier for tutors and students to communicate across different centers.

GCash makes signing up and paying simple, which is useful as more people turn to online tutoring.

Tutor verification builds trust as more people rely on online learning.

2. How can we use these strengths to overcome threats?

Smart Matching helps ETugma stand out from other tutoring platforms.

GCash offers secure payments, reducing the risk of security issues.

The chat feature allows users to get quick help when facing technical problems.

Tutor verification helps prevent fraud by ensuring tutors are legitimate.

3. What do we need to do to overcome weaknesses and seize opportunities?

Expand to more centers by partnering with more schools and offering more subjects.

Automate tutor verification to speed up the onboarding process.

Add more subjects to meet the growing demand for online learning.

4. How can we minimize weaknesses to overcome threats?

Automate tutor verification to reduce security risks and make the process faster.

Add more centers and subjects to stay competitive in the market.

Real-time session tracking can help solve tech issues and improve user experience.

Reflection:

ETugma has great features like smart matching and secure payments. To grow, it needs to offer more subjects and automate some tasks. There's a big demand for online learning, but it's important to stay secure and ahead of competitors.
